

Tecnotitlan Security Baseline Policy

Effective date: 2026-07-05

Purpose

Tecnotitlan maintains a basic operational security baseline to protect customer data, order data, payment metadata, internal systems, and marketplace integrations.

Daily Operational Controls

- Administrative access is limited to authorized Tecnotitlan staff.
- Staff devices used to access administrative systems must use operating system account protection and screen lock.
- Passwords must not be shared between staff members.
- Production credentials, API keys, database URLs, and SMTP credentials must be stored only in server-side environment or protected configuration settings.
- Sensitive credentials must not be stored in public frontend code or shared in public repositories.
- Administrative users should use strong passwords and enable multi-factor authentication where supported by the service provider.
- Staff should avoid leaving customer or order data visible on unattended screens.
- Customer information should only be accessed when needed to process orders, support requests, returns, refunds, or marketplace operations.

Review

This baseline is reviewed when operational processes change or when new integrations are added.
